

GROUND CONTROL™ HORSESHOES

Designed for the Comfort of the Horse

Designed by a horse woman, using a farrier's input every step of the way, you'll find many features that will change your way of thinking about a horseshoe.

- **Lightweight** polyurethane helps a horse to feel more natural.
- **Rolled toe** prevents toe stubbing to ease break over to provide a horse with improved movement.
- **Recessed nail channel** provides multiple nailing options yet keeps the nail head from contacting the ground. The divets in the nail channel help as a guide for nailing options, but you can actually nail anywhere in the nail channel.
- **Recessed frog support** protects the soft tissue from sharp rocks. Additionally, it stimulates the frog on impact, increasing circulation and improving your horse's endurance. This area can be removed if needed.
- **Open areas allow the sole to breathe** while also providing easy access for cleaning.
- One unique shape **fits both front (Round) or hind (oval) shaped hooves**. Simply use hoof nippers on the trim line to remove excess urethane for a custom fit.

Shoes will fit both front and hind patterns, but you may need a smaller shoe size for the hind feet.

Measurements are across the widest part of hoof (not toe to heel):

Size 000 = between 3.75" and 4.25"

Size 00 = between 4.25" and 4.5"

Size 0 = between 4.5" and 4.75"

Size 1 = between 4.75" and 5.25"

Size 2 = between 5.25" and 5.75"
