

ICE-VIBE

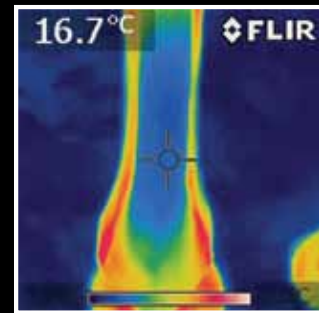

CIRCULATION THERAPY

by **HORSEWARE**
IRELAND

TREATMENT

ICE-VIBE can improve the realignment of the tendon fibers during the healing process. Cooling on its own only prevents inflammation by resisting blood flow and slows down the metabolism. ICE-VIBE uses the combination of cold and vibration which minimizes swelling while encouraging blood flow and speeds up healing.

AFTER USING ICE PACK
& VIBRATION THERAPY

Tendon after using ice pack and vibration with ice-vibe boot. Leg is significantly cooler.

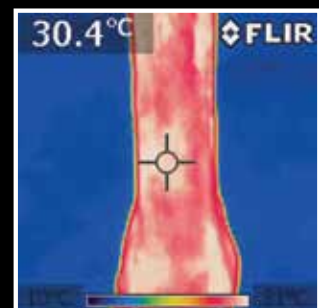

REPAIR

Just like putting miles on your car, we're putting miles on our horses every day. The blood supply to the lower limbs of a horse is very poor. Vibration stimulates blood flow to the legs, brings nutrients and removes waste.

PREPARE

Prepare to prevent damage. Use the ICE-VIBE boot with only the vibration pads at level 3 to prepare for activity.

PREPARE USING ONLY VIBRATION

Leg after using vibration panels only with ICE-VIBE boot. Ready for exercise.

NEW

ICE-VIBE is set at the optimum settings for different treatments.

Level 1 - Treatment of inflammation with cold pack.

Level 2 - Rehabilitation

Level 3 - Boosts Circulation.

Each Pack Contains:

2 ICE-VIBE Boots,

2 cold packs,

2 vibrating panels

2 batteries

1 battery charger &
3 adapters for
universal use.

Rechargeable batteries
with spare parts sold
separately (Europe only).
